

# Moth Lab

## Introduction

Moth Lab is a group of blockchain and web3 enjoyers coming together to pool resources and skills in order to bridge the competitive gap between solo dev and big tech companies.

## Why it started

Did you ever pitch an idea to the people around you just to be told something like:

It's a good idea! But to make it real you would need a lot of time because you don't have a team. Also since you are just a young student with no money to hire people, you have no choice but to take the long road of solo dev. Then the chances are pretty high that some big tech companies will already have this product fully developed and running when you're done. So this project is just not going to happen.

But the idea is good, you just can't realize it.

It happens too often in this new decentralized ecosystem that some brilliant and talented people are forced to give up on some great ideas because their situation doesn't allow them to be competitive in the market.

But on the other hand, this situation happens to thousands of people everyday and if we could all come together and work towards a common goal, we could easily make ourselves a place in the market.

So to solve this problem we started the moth lab to be a place for all these people to get together and help each other achieve their goal.

## What we aim for

We aim for the moth-lab to be a community of developers where everyone has the equal right to propose some ideas and get some help.

The system I imagine works in the following way:

First we have the base group with everyone together. In this base group, people can pitch an idea or a project. Once the pitch is done, the other members of the group will discuss the idea, propose improvements or spot technical difficulty and obstacles.

After discussion, if there is enough interest from the other members, the pitched project will be open in a sub group and those who want to participate will join it. From there, the team will split roles and make a plan to develop the

project. At all times they can go back to the general group and ask for more help or pitch a new feature.

Once the project is complete and running, the creator and team of this project will gain the honorary rank of mentor among the community.

#### **How we plan to do it**

The community's base is organized in a flat structure, meaning no member as authority on another. The way to organize the community is

#### **How to join us**
